

The Toro logo is centered at the top of the page, featuring the word "TORO" in a white, serif font inside a dark, rounded rectangular box. The background of the entire top section is a close-up, vibrant green lawn.

TORO

PUT TORO TECHNOLOGY TO WORK WITH ROTORS THAT SAVE TIME AND MONEY

Professional irrigation products that are easy to install, simple to adjust and water more efficiently are not only beneficial for pros, they create happier customers too. Toro's T5 RapidSet Series Rotors are a great example of meeting both pro and homeowner needs. This dependable series saves time, water and money for both you and your customer.

For many installers, the T5 is the go-to product for $\frac{3}{4}$ inch rotors. This technology-driven series goes the extra mile with a 5-inch pop up height in lawn models. That's a full extra inch for more nozzle clearance. The available RapidSet feature makes arc adjustments quick and easy without using any tools. Just a few twist of the turret can create adjustments anywhere from 40- to 360 degrees. A patented RapidSet slip clutch protects the rotor from gear damage during adjustment.

All T5 RapidSet rotors come with a set of eight standard nozzles and four low angle nozzles that feature Toro's proprietary Airfoil Technology. This high-tech delivery method creates a zone of low pressure just below the main water stream. Water is guided gently downward creating unmatched uniformity. The result is a more efficient delivery with less water waste.

If your customer needs the added durability of stainless steel, the T5 has you covered. Heavy-duty stainless steel models feature commercial-grade 304 stainless risers and nozzle base sleeves that prevent 'Stick-ups' and protect risers from coarse and sandy soils.

Toro T5s offer flexibility as well. Choose from lawn, effluent, shrub, high pop and stainless steel models, perfect for matching the rotor to the watering need.
